

Screw-Retained Dental Implant System with Titanium Bar & Fixed Permanent Teeth in 5 Days

Advanced Full Mouth Rehabilitation at Shaad Aesthetics Dental Clinic

At Shaad Aesthetics Dental Clinic, we believe that every smile deserves strength, beauty, comfort, and long-term stability. For patients suffering from multiple missing teeth, failing teeth, loose dentures, severe tooth wear, or complete tooth loss, our advanced screw-retained dental implant system with titanium bar-supported fixed prosthesis offers a life-changing solution for complete oral rehabilitation.

Using world-class dental implant technology and precision-guided digital dentistry, we provide fixed permanent teeth in just 5 days, restoring confidence, function, aesthetics, and quality of life with exceptional accuracy and comfort.

What Is a Screw-Retained Implant Prosthesis?

A screw-retained implant prosthesis is a modern full-mouth dental restoration that is securely attached to dental implants using precision screws instead of dental cement. This advanced technique creates a highly stable, retrievable, hygienic, and long-lasting restoration for patients requiring complete oral rehabilitation.

Unlike removable dentures, a screw-retained prosthesis remains firmly fixed in the mouth, allowing patients to eat, smile, laugh, and speak confidently without fear of movement or discomfort.

At Shaad Aesthetics, we combine:

Strategically placed dental implants

Custom-designed titanium bar framework

Digitally fabricated fixed prosthetic teeth

Full-mouth smile rehabilitation protocols to create strong, natural-looking, permanent smiles with superior functionality.

Why Titanium Bar-Supported Implant Systems Are Superior?

The titanium bar implant system is considered one of the most reliable and durable full-mouth rehabilitation solutions in modern implant dentistry.

Key Advantages of Titanium Bar Prostheses

Exceptional Strength & Stability

Titanium is biocompatible, lightweight, corrosion-resistant, and extremely strong. The titanium bar distributes biting forces evenly across implants, reducing stress and improving longevity.

Fixed Permanent Teeth

Patients receive a fixed prosthesis that feels close to natural teeth. There is no need to remove dentures daily.

Improved Chewing Efficiency

Patients can comfortably eat a wider variety of foods compared to conventional dentures.

Natural Smile Aesthetics

Custom-designed prosthetic teeth restore facial support, smile harmony, and youthful appearance.

Better Speech & Confidence

Because the prosthesis is securely fixed, patients experience improved pronunciation and confidence during social interactions.

Easy Maintenance & Retrievability

The screw-retained design allows dentists to remove the prosthesis for professional maintenance whenever necessary without damaging the restoration.

Long-Term Oral Rehabilitation

With proper care and regular dental visits, implant-supported fixed prostheses can provide lasting results for many years.

Fixed Permanent Teeth in 5 Days – The Shaad Aesthetics Protocol

At Shaad Aesthetics Dental Clinic, our advanced 5-day full mouth dental implant rehabilitation protocol is designed for efficiency, precision, comfort, and predictable outcomes.

Initial Consultation & Digital Smile Planning

The journey begins with a comprehensive evaluation including:

Digital smile analysis

CBCT scan for implant planning

3D oral assessment

Bite evaluation

Facial profile assessment

Implant suitability analysis

Our implant specialists carefully design a customized treatment plan based on the patient's bone structure, aesthetics, and functional requirements.

Day 1 – Dental Implant Placement Surgery & Immediate Temporary Teeth

Using guided implant surgery techniques, strategically planned dental implants are placed with precision into the jawbone.

Depending on the clinical condition, procedures may include:

Full mouth dental implants

Immediate implant placement

Bone contouring

Extraction of failing teeth

Immediate loading implant protocols

At Shaad Aesthetics, we prioritize minimally invasive implant surgery for faster healing, reduced discomfort, and predictable outcomes.

Teeth Within 24 Hours

One of the greatest advantages of our advanced immediate loading protocol is that patients do not remain without teeth after surgery. Depending on the clinical condition and implant stability, a same-day or next-day temporary fixed prosthesis is provided to ensure patients receive functional teeth within 24 hours of implant placement.

These temporary prostheses are carefully designed to provide:

Immediate smile restoration

Improved speech and facial support

Functional chewing ability

Enhanced comfort and confidence during healing

Day 2 - Multiple Temporary Trials for Precision Bite & Function

At Shaad Aesthetics Dental Clinic, we believe that long-term implant success depends on precise bite harmony and functional balance. Multiple temporary prosthetic trials are performed during the healing phase to evaluate and refine:

Bite alignment

Jaw balance

Chewing efficiency

Speech adaptation

Smile aesthetics

Functional comfort

This step-by-step customization process allows our implant specialists to fine-tune the final prosthesis with exceptional precision, ensuring the patient receives a stable, comfortable, natural-looking, and long-lasting fixed smile.

Day 3 – Titanium Bar Designing & Digital Prosthetic Workflow

After implant placement, advanced digital impressions and jaw relation records are taken.

A custom CAD/CAM titanium bar framework is fabricated to ensure:

Passive fit

Structural strength

Precision alignment

Long-term durability

This framework acts as the foundation for the fixed prosthetic teeth.

Day 4 – Prosthetic Trial & Smile Customization

Patients undergo trial fittings to evaluate:

Smile aesthetics

Tooth shape and shade

Facial balance

Bite alignment

Speech adaptation

Our smile design experts ensure that every restoration complements the patient's facial features naturally.

Day 5 – Delivery of Fixed Permanent Teeth

The final screw-retained fixed prosthesis is securely attached to the titanium bar-supported implant system.

Patients leave with:

Fixed permanent teeth

Functional bite restoration

Improved smile aesthetics

Enhanced facial support

Renewed confidence

This transformation can dramatically improve both oral health and emotional well-being.

Who Is an Ideal Candidate for Full Mouth Dental Implants?

This treatment is ideal for patients who have:

Complete tooth loss

Multiple missing teeth

Loose or uncomfortable dentures

Failing bridges or crowns

Advanced gum disease

Severe tooth wear

Broken or damaged teeth

Difficulty chewing food

Poor oral function and aesthetics

Even patients with reduced bone availability may qualify after proper evaluation.

Why Choose Shaad Aesthetics Dental Clinic for Full Mouth Rehabilitation?

At Shaad Aesthetics, we focus on precision-driven implant dentistry with patient-centered care.

Our Expertise Includes:

Full mouth dental implants

Immediate loading implant systems

Titanium bar-supported prostheses

Screw-retained implant restorations

Digital smile designing

Complete oral rehabilitation

Cosmetic and restorative dentistry

Advanced implant planning technology

We combine modern technology, clinical expertise, aesthetic excellence, and personalized care to deliver long-lasting smile transformations.

Benefits of Immediate Full Mouth Implant Rehabilitation

Patients choosing fixed implant-supported teeth often experience:

Faster smile restoration

Improved facial aesthetics

Better chewing ability

Enhanced confidence

Stable and fixed teeth

Reduced bone loss

Improved oral comfort

Long-term durability

Natural appearance

Better quality of life

Transform Your Smile with Permanent Dental Implants

A healthy smile influences confidence, appearance, nutrition, speech, and overall well-being. With our advanced screw-retained titanium bar implant system, patients no longer need to struggle with removable dentures or missing teeth.

At Shaad Aesthetics Dental Clinic, we are committed to delivering world-class full-mouth rehabilitation solutions that restore smiles with precision, comfort, and long-term success.

Shaad Aesthetics Dental Clinic offers comprehensive solutions tailored to your needs.

Your new smile can begin in just 5 days.
